Project Submission Sheet

Student Name: Matheus Borges Mota Reis

Student ID: 24335657

Programme: Bachelor of Science (Honours) in Computing Information **Year:** 1

Module: Web Design and Development

Lecturer: Emer Thornbury

Submission Due Date: 5th December, 2025

Project Title: SDG 4 – Quality Education

Word Count:

I hereby certify that the information contained in this (my submission) is information pertaining to research I conducted for this project. All information other than my own contribution will be fully referenced and listed in the relevant bibliography section at the rear of the project.

ALL internet material must be referenced in the references section. Students are encouraged to use the Harvard Referencing Standard supplied by the Library. To use other author's written or electronic work is illegal (plagiarism) and may result in disciplinary action. Students may be required to undergo a viva (oral examination) if there is suspicion about the validity of their submitted work.

Signature: Matheus Borges Mota Reis

Date: 05/12/2015

PLEASE READ THE FOLLOWING INSTRUCTIONS:

1. Please attach a completed copy of this sheet to each project (including multiple copies).
2. Projects should be submitted to your Programme Coordinator.
3. **You must ensure that you retain a HARD COPY of ALL projects**, both for your own reference and in case a project is lost or mislaid. It is not sufficient to keep a copy on computer. Please do not bind projects or place in covers unless specifically requested.
4. You must ensure that all projects are submitted to your Programme Coordinator on or before the required submission date. **Late submissions will incur penalties.**
5. All projects must be submitted and passed in order to successfully complete the year. **Any project/assignment not submitted will be marked as a fail.**
6. **Please check that you read AI and Academic Integrity Acknowledgement Supplements in this document**

AI Acknowledgement Supplement

Web Design and Development

SDG 4 – Quality Education

Your Name/Student Number	Course	Date
Matheus Borges Mota Reis	BSc (Hons) in Computing Information	05/12/2025

This section is a supplement to the main assignment, to be used if AI was used in any capacity in the creation of your assignment; if you have queries about how to do this, please contact your lecturer. For an example of how to fill these sections out, please click [here](#).

AI Acknowledgment

This section acknowledges the AI tools that were utilized in the process of completing this assignment.

Tool Name	Brief Description	Link to tool
ChatGPT	Used as a learning aid to clarify HTML, CSS, JavaScript, responsive design and to help brainstorm ideas. No AI- generated code was pasted directly into the final website or report, all final content is my own work.	https://chatgpt.com

Description of AI Usage

This section provides a more detailed description of how the AI tools were used in the assignment. It includes information about the prompts given to the AI tool, the responses received, and how these responses were utilized or modified in the assignment. **One table should be used for each tool used.**

ChatGPT (openAI)	
I used ChatGPT outside of class as a tutor to help me to understand and clarify topics, like: W3C standards, responsive design, Bootstrap, forms and validation. I got examples of HTML/CSS/JavaScript patterns which I rewrote and adapted myself. Also got feedback and suggestions for improvements. I did not copy and paste AI-generated code into the final submission.	
Explain at beginner level how to use JavaScript to validate an HTML contact form so that required fields are filled in and the email has a valid format. Please use simple examples so I can adapt the code myself.	The AI described the steps to: select input elements with getElementById, use if / else and comparison operators to check for empty strings, use a basic regular expression for email format, and show error messages near the inputs. It also showed a short example function structure which I used only as a reference when writing my own validation code.

Evidence of AI Usage

This section includes evidence of significant prompts and responses used or generated through the AI tool. It should provide a clear understanding of the extent to which the AI tool was used in the assignment. Evidence may be attached via screenshots or text.

Thought for 8s

Good question – this is a perfect thing to really understand instead of just copy-pasting.

Let's build it up from zero and keep it to **one small form** with **Name + Email + Message**.

1. Very simple HTML form

Here's a tiny example you can run on its own:

```
html

<form id="contactForm">
  <div class="field">
    <label for="name">Name</label>
    <input id="name" type="text">
    <small class="error"></small>
  </div>

  <div class="field">
    <label for="email">Email</label>
    <input id="email" type="text">
    <small class="error"></small>
  </div>
</form>
```

2. Getting elements with JavaScript

In a `<script>` tag (or separate JS file after the HTML), grab the elements:

```
jsconst form = document.getElementById('contactForm');
const nameInput = document.getElementById('name');
const emailInput = document.getElementById('email');
const messageInput = document.getElementById('message');
```

Now `nameInput.value`, `emailInput.value` etc. give you what the user typed.

3. Listen to the submit event

We want to check the form when the user clicks "Send".

```
jsform.addEventListener('submit', function (event) {
  // stop the form from actually sending for a moment
  event.preventDefault();

  // run our checks
  const isValid = validateForm();

  // if everything is okay, allow the real submit (optional)
  if (isValid) {
    // here you could submit via mailto, fetch, etc.
    // for now let's just log a message
    console.log('Form is valid - you can submit it now!');
  }
});
```
